

Apex Multispeciality Hospital & Diagnostics

Department of Nephrology

Patient Name	Raj Malhotra
Age / Gender	50 Years / Male
Patient ID	AMH-2026-07142
Consultation Date	27-May-2026
Consulting Doctor	Dr. Sameer Bhatia, DM (Nephrology)

Diagnosis:

Chronic Kidney Disease (CKD) with impaired renal function and elevated creatinine levels.

Prescription

Medicine	Dosage	Timing	Duration	Instructions
Telmisartan 40 mg	1 Tablet	Once Daily - Morning	30 Days	Monitor BP regularly
Sevelamer 800 mg	1 Tablet	Three Times Daily	30 Days	Take with meals
Erythropoietin Injection	4000 IU	Weekly	4 Weeks	Administer under supervision
Furosemide 40 mg	1 Tablet	Once Daily - Morning	30 Days	Maintain hydration

Doctor Notes:

- Follow a low-sodium and kidney-friendly diet.
- Restrict excessive protein and potassium-rich foods as advised.
- Maintain adequate hydration unless fluid restriction is advised.
- Avoid non-prescribed painkillers and nephrotoxic medications.
- Monitor blood pressure and urine output regularly.
- Repeat renal function tests after 4 weeks.
- Seek immediate medical attention if swelling, breathing difficulty, or reduced urine output worsens.
